(a) The Company's continuous disclosure documents provide discussion and analysis of "EBITDA", "EBITDA per share", "shareholder free cash flow" and "shareholder free cash flow per share". These financial measures do not have standard definitions prescribed by IFRS and, therefore, may not be comparable to similar measures disclosed by other companies. The Company has included these non-GAAP financial measures because management, investors, analysts and others use them as measures of the Company's financial performance. The Company's definition of EBITDA is cash available to invest in growing the Company's seismic data library, pay interest and principal on its long-term debt, purchase its common shares, pay taxes and the payment of dividends. EBITDA is calculated as earnings (loss) from operations before interest, taxes, depreciation and amortization. EBITDA per share is defined as EBITDA divided by the weighted average number of shares outstanding for the period. The Company believes EBITDA assists investors in comparing Pulse's results on a consistent basis without regard to non-cash items, such as depreciation and amortization, which can vary significantly depending on accounting methods or non-operating factors such as historical cost. Shareholder free cash flow further refines the calculation by adding back non-cash expenses, net restructuring costs and deducting net financing costs and current income tax expense from EBITDA. Shareholder free cash flow per share is defined as shareholder free cash flow divided by the weighted average number of shares outstanding for the period.

(b) TTM EBITDA is defined as the sum of EBITDA generated over the previous 12 months and is used to provide a comparable annualized measure.

These non-GAAP financial measures are defined, calculated and reconciled to the nearest GAAP financial measures in the Management's Discussion and Analysis.

#### **OUTLOOK**

Despite low seismic data library sales in the first half, the Company regards overall trends in Western Canada as positive and conditions favourable for both types of seismic data sales. Numerous producing oil and natural gas asset packages are on the market, while industry capital investment, drilling rates and mineral lease auctions or "land sales" are continuing to rebound in response to high commodity prices and robust global demand. Crude oil and natural gas remain critical sources of energy worldwide, and recognition continues to grow that security of supply is important to manage geopolitical risks.

With zero debt, a low cost structure, high cash margin, no capital spending commitments, access to credit on favourable terms, Canada's largest licensable seismic data library providing coverage in all major non-oil-sands oil and natural gas plays across western Canada, strong customer relations, and its ongoing initiative to enhance the attractiveness of its data for broader application in new-energy as well as traditional projects, Pulse is favourably positioned to benefit from an industry growth cycle as well as to weather weaker sales.

A transaction-based data library sale of any size can occur at any time, and sales in any quarter can be higher or lower than in the previous quarter or in the comparable quarter of a previous year. Pulse also cautions that there is no direct linkage between industry field conditions and demand for seismic data, resulting in innately poor visibility as to Pulse's future traditional sales.

Pulse remains focused on the business practices that have enabled it to navigate and thrive through the full range of conditions: maintaining a strong balance sheet with access to credit on favourable terms, careful management of cash resources including distributing cash to shareholders when prudent, a low cost structure, a disciplined and rigorous approach to growth opportunities, an experienced and capable management team, and excellent customer care.

### CORPORATE PROFILE

Pulse is a market leader in the acquisition, marketing and licensing of 2D and 3D seismic data to the western Canadian energy sector. Pulse owns the largest licensable seismic data library in Canada, currently consisting of approximately 65,310 square kilometres of 3D seismic and 829,207 kilometres of 2D seismic. The library extensively covers the Western Canada Sedimentary Basin, where most of Canada's oil and natural gas exploration and development occur.
