¹The net premiums written growth for the month primarily reflects growth in the transportation network company (TNC) business due to: (a) policy renewal of certain TNC policies for a 12-month term, compared to the previous 6-month policy period, which has about double the amount of premiums per policy; (b) an increase in projected mileage, which is the basis for computing premiums, as the industry continues to recover from the pandemic; and (c) rate increases taken to address profitability. Excluding the TNC business, the Commercial Lines net premiums written growth would have been about 40% with our for-hire transportation business market target continuing to experience solid growth.

²Included in both the expense ratio and combined ratio is 2.7 points of amortization expense predominately associated with the acquisition of a controlling interest in ARX. Excluding these additional expenses, the Property business would have reported an expense ratio of 25.6 and a combined ratio of 78.9.

³Represents catastrophe losses incurred during the period, including the impact of reinsurance, as a percent of net premiums earned.

⁴Represents adjustments solely based on our normally scheduled actuarial reviews. For our Property business, the actuarial reserving methodology includes changes to catastrophe losses, while the reviews in our vehicle businesses do not include catastrophes.

In addition, investors should be aware that generally accepted accounting principles prescribe when a company may reserve for particular risks, including litigation exposures. Accordingly, results for a given reporting period could be significantly affected if and when we establish reserves for one or more contingencies. Also, our regular reserve reviews may result in adjustments of varying magnitude as additional information regarding claims activity becomes known. Reported results, therefore, may be volatile in certain accounting periods.
