

# You don't control your entities — and it's slowing everything down.

Gain full control over your entity data by unifying it into a single, authoritative record that's purpose-built for fund, investment and portfolio structures.

## Private markets run on structures most systems weren't built to support.

Fund data is spread across fund admins, law firms and internal systems, requiring constant reconciliation.

Most tools force complex fund structures into corporate or legal models creating more fragmentation instead of less.

Athenian for Private Markets changes that.

## Built for how private markets actually operate

### Model real fund structures

Capture funds, vehicles and ownership as they actually exist without workarounds.

### Turn data into execution

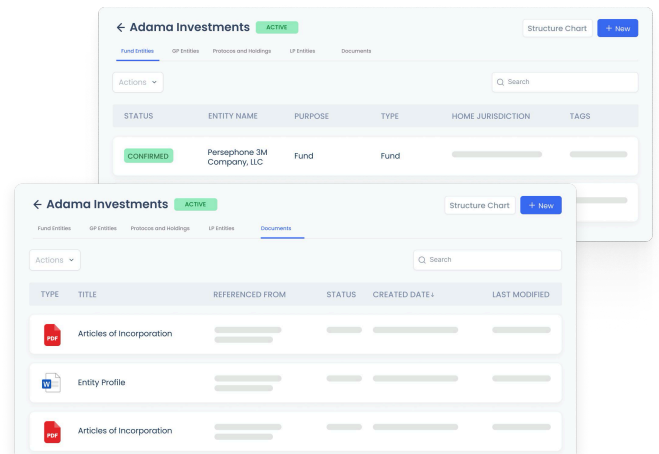

Your data powers agentic KYC, compliance and deal workflows across the business.

### Connected source of truth

Keep details in sync as deals, structures and data change across systems.

## Enabled with Athenian for Private Markets

- Accelerate deal execution and liquidity without data bottlenecks
- Reduce legal spend and operational rework
- Minimize audit and reporting risk
- Scale fund operations without added complexity

## Complexity is accelerating, and the current model doesn't scale.
