

FAQs

What is Anytime Pediatrics?

Anytime Pediatrics is a complete pediatric virtual care solution—designed for pediatric clinicians by a pediatrician and pediatric practice administrator—with the key mission to foster the clinician-patient relationship. Our platform connects patients and pediatric clinicians in a unique way that ensures patient, family and clinician satisfaction, trusted care, and continuity of care. Anytime Pediatrics also helps clinicians reduce loss of patients to other “providers” and expand their practices’ reach. Our simple, easy-to-use technology can be accessed from anywhere, using a smart phone, tablet or computer. **We are building the next generation of healthcare delivered virtually.**

Co-founded in 2016 by Dr. Mick Connors, M.D. (a pediatrician) and Angie Connors (a pediatric practice leader)—together the parents of four—Anytime Pediatrics is a pioneer in virtual healthcare that has grown to serve thousands of pediatric clinicians nationwide and hundreds of thousands of children.

How is Anytime Pediatrics different from others in the telehealth space?

Anytime Pediatrics is distinguished from others in the telemedicine market in three vital ways:

- Our “Software as a Solution” (SaaS) model means we help clinicians and local networks build on their relationships through **collaboration**—not competition.
- **We believe in the power of keeping care local.** This is why we work with board-certified pediatric practices, clinicians, specialists and partners nationwide. If patients can’t connect directly to you, we want you to guide them to nearby partners you choose.
- Because Anytime Pediatrics was designed for pediatrics by experienced pediatric experts, we understand that children need and benefit from specialized care that isn’t often found at the retail or urgent-care clinic on the corner. **Kids need their trusted pediatric care or be guided to the care their pediatric clinician trusts.**

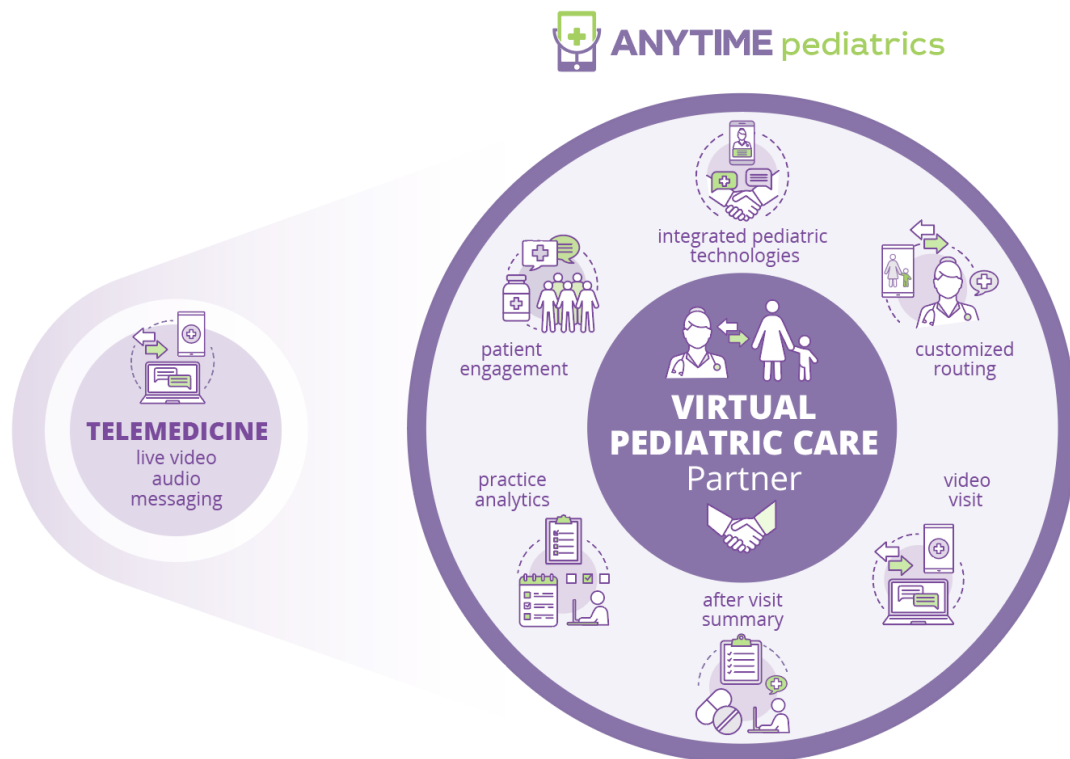

What specialties and practice types use Anytime Pediatrics?

Anytime Pediatrics works with individual pediatricians, pediatric group practices, pediatric specialists, pediatric clinically integrated networks, pediatric urgent cares and children’s hospitals. Imagine a network of pediatric care centered around a patient’s medical home.

What's the difference between telemedicine and virtual healthcare?

While telemedicine is merely a way to connect clinicians and patients via video interface (similar to a conferencing app), virtual healthcare goes much further to fully mimic in-office visits. From patient engagement and integrated technologies to customized routing and practice analytics, Anytime Pediatrics has taken that next step as a virtual care partner. Offering full features and functionality, we do all the heavy lifting to help our practitioner partners provide quality care and foster their clinician-patient relationships.

Anytime Pediatrics was named the 2021 “Best of Pediatrics” in Online Doctor and Medical Services by Onlinedoctor.com.

Anytime Pediatrics was named in the Best New Medical Technology for 2020 by Contemporary Pediatrics.
