

(Figure 1: Geologic map of the Comet Well project showing the location of newly mapped tuff marker bed that is closely associated with the upper gold-bearing conglomerate. Excavation sites are denoted by blue squares. Sampling of the upper gold-bearing conglomerate has recently been undertaken at Cannonball Gully, 150S, 250E and 420E. Gold nuggets have been exhumed and detector strikes noted from each of these locations. Section A-A' is illustrated in Figure 5.)
