Corteva Agriscience Unveils Telbek™ PRO: First Group 21 Fungicide in Cereals, Tackling Fusarium Head Blight for Canadian Wheat Growers

Novel Group 21 Cereal Technology Delivers Unprecedented Protection Against Fusarium Head Blight And Late-Season Leaf Diseases, Giving Canadian Farmers Fusarium Control They Can Trust

[Calgary AB – Jan. 20, 2026] – In a first for Canadian wheat growers, Corteva Agriscience today proudly launches **Telbek™ PRO**, the innovative fungicide powered by Adavelt™ active and delivering a new mode of action to cereal growers. Developed to target Fusarium head blight and late-season leaf diseases, this innovation delivers unmatched broad-spectrum protection.

Fusarium head blight (FHB) can be a challenge for Canadian wheat growers, impacting yields and quality in harvest season. Telbek PRO with Adavelt active boasts dual modes of action, Group 3 and Group 21. This proven combination and novel mode of action means not only is it designed to delay resistance development, it also delivers suppression of FHB alongside robust control of Septoria, leaf and stripe rust, tan spot, and glume blotch to help Canadian farmers get the most from every acre.

"Telbek™ PRO represents a significant advancement in fungicide technology, giving Canadian cereal growers greater confidence and accuracy in managing FHB," said Loralee Orr, Canadian Vice President of Commercial, Corteva. "This launch expands our cereal portfolio and establishes a new benchmark for yield protection and return on investment in Canadian wheat."

Telbek™ PRO represents the forefront of fungicide innovation. Its advanced formulation targets diseases at their core, ensuring robust performance even under high-disease pressure. Early field trials have shown impressive results, with growers reporting enhanced yield stability and cleaner grain.

Available now through Corteva representatives across Canada, this fungicide is ready to roll into 2026 planting seasons.
