Managing Director,
Treasury and Trade
Solutions, Citigroup

MODERATED BY

ADITYA NARAIN

Deputy Director, Monetary and
Capital Markets Department, IMF;
Board Member, Toronto Centre

Toronto Centre is generously supported by:

Global Affairs
Canada

Affaires mondiales
Canada

Why You Should Attend

This session is designed for financial sector regulators and supervisors, central bankers, officials from ministries of finance, the IMF and the World Bank, international development agencies, non-governmental organizations and the private sector.

New technological developments have triggered profound changes in the financial sector. This trend is especially driven by the availability of large quantities of data – including big data – and by improved opportunities for using these data that are made possible by artificial intelligence (AI). This trend and the ability to analyze these data offer the potential for financial institutions to make better informed decisions. Combining analytics and the mass of data available helps to generate new insights, which can then be used to facilitate product and process innovations. These innovations can have a disruptive impact on existing value creation processes. Consequently, new providers can enter the market, and established business processes and market structures can change. Innovative developments require supervisory/regulatory attention at an early stage. The panel will draw on market analyses and use examples to outline both potential developments – as seen from the perspective of banks, insurance companies and capital markets – and the impact on consumers.

Big data can play a vital role in achieving the UN Sustainable Development Goals (SDGs). In the Philippines, governments are using GPS data from taxis to reduce accidents and improve emergency services. In Kenya, FinTech companies have already begun using big data sources for tasks that include customizing products to suit different client segments and alternative credit scoring methods for those without a credit history. There are also pragmatic aspects to consider: big data can be wider, deeper, more rapidly provided, and in some cases more cost-effective than traditional data. However, big data analytics also has its limitations and risks. Access to big data may be a challenge as it may be expensive and requires technical knowledge to retrieve, handle and store. There are also major privacy implications. The panel will discuss the benefits of big data, and the risks and policy implications relevant to financial supervision and the SDGs. More specifically, the panel will examine:

- What are the major shifts in the structure and regulation of financial markets and emerging risks due to big data and AI?
- What are the opportunities that big data and AI represent for achieving the SDGs? What is the added value of leveraging big data for SDGs?
- What are the potential impacts of big data and AI on financial markets, market players and financial supervisory authorities? Are all these impacts positive, or could some result in unwelcome consequences?
- Regulatory considerations: how can and where should algorithms be used, and what requirements should apply to their developers and users? Is there any regulatory heterogeneity among jurisdictions?
- How should legal issues relating to privacy and data protection, consumer protection and cross-border issues be addressed?

ABOUT TORONTO CENTRE

Established in 1998, Toronto Centre for Global Leadership in Financial Supervision (Toronto Centre) is an independent not-for-profit organization that promotes financial stability and access to financial services globally by providing high quality capacity building programs for financial sector regulators and supervisors, particularly in emerging markets and low-income countries. We believe that for countries to thrive, their financial systems must be stable and inclusive. By helping to build these economic foundations, the Centre's mission supports sustainable growth and job creation, and helps to reduce poverty. Toronto Centre's mission is aligned with UN 2030 Sustainable Development Goals and Canada's Feminist International Development Assistance and Swedish International Development priorities. Since 1998, the Centre has trained more than 10,000 supervisors and regulators from over 190 countries and territories. Toronto Centre is supported by Global Affairs Canada, the IMF, Swedish Sida, and other valuable international partners such as the World Bank. For more information, please visit www.torontocentre.org

This is an OPEN EVENT, but we expect seating will be limited due to high demand.

REGISTRATION IS ENCOURAGED

Please inform **Ms. Demet Çanakçı** at dcanakci@torontocentre.org if you wish to attend.
