

# Finding fraud in claims photos

with ISO ClaimSearch® loss image search and forensics

## Meta data shows discrepancy

Adjuster can identify that the claim is suspicious since meta data shows loss was in different city.

## Prior loss found for same damage

ISO ClaimSearch provides adjuster with image matching claim for same damage that was handled by a different insurer **two years before date of loss**.

## Multiple matches found online

Adjuster refers claim to SIU when the loss image is **found in multiple sites online**.

Found Online	Date Uploaded
ejobnet.info	March 2010
ashireporter.org	March 2010
armorgarage.com	November 2015

## Photo submitted multiple times

In this case, a staff adjuster was found to have submitted this photo **170 times** for his claim estimates. There was over **\$1 million in claim impact**.
